SOC 4930/5050: Weekly Prep 08 - Getting Started with LaTeX

Christopher Prener, Ph.D.

October 16ᵗʰ, 2017

Directions

Complete all of the following questions. A replication video will be posted on YouTube. A well-formatted `pdf` created in LATEX should be uploaded to your GitHub assignment repository by 4:15pm on Monday, October 16ᵗʰ, 2017.

Getting Started with LATEX

1. Log into ShareLaTeX.com

2. Create a New Project named "Weekly Prep 08"

3. When your new project opens, check and make sure your name and the date are correctly filled out. If you need to make changes, you can edit the text in the center pane of the screen. Adjustments to the date and author can be made in the **Preamble** (the area above `\begin{document}`). Make sure the date includes the day of the week, not just the month and the year.

4. Below the "Introduction" section, add the following text: "`This is my first \LaTeX{} document!`".

5. Use the Recompile button to update your `pdf`, and then choose the Download button next to Recompile to download a copy of the document for submission.
